of their nation's maritime infrastructure. IMLI graduates are also active in the deliberations of international organizations, such as the IMO.

The Institute's work has been recognized by the United Nations General Assembly through its numerous resolutions on 'Oceans and the law of the sea'. Resolution A/Res/72/73 of 5 December 2017 recognized:

... the importance of the work of the Malta-based International Maritime Law Institute of the International Maritime Organization, as a centre of education and training of specialists in maritime law, including government legal advisers and other high-level officials, mainly from developing States, confirms its effective capacity-building role in the field of international maritime law, shipping law and marine environmental law, and urges States, intergovernmental organizations and financial institutions to make voluntary financial contributions to the budget of the Institute which runs annually.

The Nippon Foundation has been a dependable supporter of the Institute's capacity building efforts. Since 2003 it has funded the 'Human Resources Development Project for the Advancement of a More Effective Global Legal Order for the Oceans', which is now in its fifteenth year. The Project, so far, has directly contributed to the training of one hundred and 153 Nippon Scholars from 66 States.

IMLI is a small institution with a global mission to provide governments with the expertise necessary to participate in the codification and progressive development of international maritime law. Over the past twenty-nine years, it has grown into a centre of excellence which through its graduates, is contributing to the efforts to ensure the better governance of our oceans. This success augurs well for more years of service to the rule of international maritime law.
